AUTOFIELD
WATER PUMP

Introduction...

success and over whelming response of long life Radiator Coolant, company introduce other quality product Autofield Brand WATER PUMP. Experience of detailed engineering over the period of time to adopt the latest technologies, methods and facilities to develop quality Water Pump like; AutoCAD design & Drawing, Quality Control & Inspection, Testing System at every level. All this done through latest machines, tooling, trained & skilled manpower along with good Knowledge of casting, forging, seals, bearing, power ceramic & rubber components of Water Pump. Company constantly adopt the changing demands of customer and market with new design & an extensive product range of Water Pump. For that we have taken significant steps to strengthen our research and development department for changing in technical level and also we focussed to satisfy customer's need. In short we are highly motivated, committed and aimed to serve you the best.

AUTOFIELD

Introduction...

Autofield India is manufacturer of Synthetic Polymer based Radiator Coolant as per OEM Standard quality since 1990. After success and over whelming response of long life Radiator Coolant, company introduce other quality product Autofield Brand WATER PUMP.

Experience of detailed engineering over the period of time to adopt the latest technologies, methods and facilities to develop quality Water Pump like; AutoCAD design & Drawing, Quality Control & Inspection, Testing System at every level. All this done through latest machines, tooling, trained & skilled manpower along with good knowledge of casting, forging, seals, bearing, power ceramic & rubber components of Water Pump.

Company constantly adopt the changing demands of customer and market with new design & an extensive product range of Water Pump. For that we have taken significant steps to strengthen our research and development department for changing in technical level and also we focussed to satisfy customer's need. In short we are highly motivated, committed and aimed to serve you the best.

Inspection & Laboratory...

Water Pump is an essential product for the cooling system so it has been manufacturing as per our all critical measuring instruments, for inspection of components, Hardness Tester, Surface Plate, Between Centre, Mechanical Comparator Stand, Spring Load Tester, Digital Tachometer, Digital Height Gauge, Crack Detector, Air Testing Unit, Microscope for Micro Structure of material & Various other testing facility. We do follow various std. & parameters for our pump components.

Balancing

Moving parts of Water Pump assembly as pulley and impeller are dynamically balanced to avoid uneven load on bearing and seal assembly during running as per ISO 1940 Std. according to pump object weight & RPM of pumps to remove unbalance mass of object.

Hardness Testing

Testing in temp. as high as 100°C discharging 40 to 200 Lit/min of flow with 8 to 15 PSI pressure & 4000 RPM of any Water Pump for leakage. We do endurance test with uttermost precision to check the life of moving component & wear out of pumps with different parameters.

Finally our design department helps the production department to meet changing demand of its customers satisfaction at every stage.

Essential & Important Parts...

The right quality seal used with high alumina ceramic seal face or unitized seal. Spindle Bearing, Cylindrical, Ball & Tapper Roller Bearing are of reputed company's used with correct design & as per bearing size tolerance. Shafts are made from appropriate quality steel heat treated and properly ground.

Assembly & Impellers...

Components are made of closed C.I. casting, brass or aluminum pressure die cast and passed through different machining operations in house with proper jigs and fixtures are used to ensure precision & are inspected as per the drawing specifications. All Water Pump Components are assembled precisely considering different pump dimensions. Impellers of correct design is important for cooling of engine and proper flow.

Parts...

Other items like gasket, oil seals, grease cup & nut bolts ect. are of genuine quality to avoid premature failure of any small components.

Moving parts of Water Pump assemblies as pulley & Impellers are dynamically balanced to avoid uneven load on bearing & Seal during running.

Water Pump assemblies are tested by hydraulic pressure for leakage. Our product have assured total interchangeability within existing applications.

AUTOFIELD WATER PUMP

DUPLICATE या नकली उत्पादों से सावधान

प्रिय मित्रों भाइयों,

Duplicate या नकली Water Pump Assy. आपको जल वाली मिल जाएगी और Leakage न होने की गारंटी भी मिलेगी। इससे आप संतुष्ट हो जाते हैं। मगर आपको ये पता होना चाहिए कि W. P. Assy. आपकी गाड़ी के Engine की जान है। अगर वह Engine के प्रवाहकों को पूर्ण नहीं करता और Engine के Temp. को $80 \pm 3^\circ$ Maintain

नहीं करता तो आपकी गाड़ी पर Engine लगातार खराब हो रहा है। Sub-standard Suppliers में Spare Parts इकट्ठा करके एक कमरे में 8-10 व्यक्तियों के साथ Water Pump Assy. टैंक कर और बिखाने के लिए ऊपर से **AUTOFIELD** बैसा बनाकर आपको बहुत बड़ा धोखा दिया जा रहा है और आपकी गाड़ी के Engine को खराब किया जा रहा है।

बीमरत मुगलत पर निर्भर नहीं है। **AUTOFIELD** हर तरह से प्रमाणिकता को पूर्ण करता है। **AUTOFIELD WATER PUMP** 100% Drawing को Follow करके Required Material के साथ CNC और VMC पर बनाया जाता है और हर Part का Seal भी Perfect मानकों के अनुसार बनाया जाता है। हम बाहर बने किसी Part की Quality पर विश्वास नहीं करते और हमारे हर Department & Spare Parts Division, Assy. Division & Testing Division में Technical Engineers की मौजूदगी है। सभी से नकली उत्पाद सस्ता होते हुए भी उन Manufacturers के लिए Profitable है। मगर **AUTOFIELD** हमेशा आपको एक ही बात करता है कि हम Quality Vise अति उच्च और Rate Vise हमेशा Reasonable हैं। जिस नकली उत्पादको आप सस्ता कहते हैं वो असल में सस्ता नहीं, बल्कि आप ठगो जा रहे हैं।

BEWARE OF DUPLICATE OR IMITATIVE PRODUCTS

Dear mechanic brothers,

You would surely get duplicate or imitative water pump assemblies at lower price with guarantee too of no leakage. You would also get satisfied with such offerings in the market. But you must know that the water pump assembly is the heart of the engine.

If it does not qualify the engine specifications and requirements and does not maintain the engine temperature within 80 ± 3 degree Celsius, the engine constantly moves towards the failure or collapse. By mere collecting spare parts from sub standard suppliers here and there and assembling them in small room or space using just 3 to 10 employees and then making the pump's external look similar to **AUTOFIELD** these imitative manufactures are cheating you and also cause damage to the engine. They are not at all bothered about the maintenance of engine temperature which is actually the real function of the water pump.

The value of the product depends upon its dimensional and functional quality. **AUTOFIELD** pump fulfills all the standard dimensional specifications and functional parameters. **AUTOFIELD** Water pump absolutely and strictly follows the standard drawings with its components entirely being machined on CNC/VMC machines and the heart of the pump the W.P seal is completely made in house as per standard specifications.

We do not trust the quality of outsourced components for which we have a big troop of technical engineers in every department like machine shop, spare parts division, assembly division and testing division.

The imitative manufacturers do not provide the functional quality that we do and that is why their product despite being cheap is profitable to them.

BUT **AUTOFIELD** has always kept its promise of being superb in quality and reasonable in price. The duplicate product which you call better priced is actually deceptive and you are being robbed of the right quality which is your true right.

वाटर पम्प को असफल होने से रोके, इन साधारण नियमों के साथ

सुनिश्चित कर लें कि सर्फेस एकदम साफ है।

वाटर पम्प लगाने से पहले जहाँ-जहाँ पुरानी गैसकेट लगी है, उसको अच्छी तरह ऊपर कर सर्फेस एकदम साफ कर लें और फिर नई गैसकेट में ज्वेल कंपाउंड लगाकर वाटर पम्प लगाएं।

वियरिंग शाफ्ट पर हथौड़े से चोट न करें।

वाटर पम्प को इन्जन में एलाइनमेंट करते समय वियरिंग शाफ्ट पर हथौड़े की चोट मत मारें क्योंकि इससे बियिंग की बोल बैलेंस हो सकती है, जिससे वाटर पम्प जल्दी खराब हो सकता है या शाफ्ट टूट सकती है।

बैल्ट को कभी ज्यादा न करें।

ज्यादा कभी हुई बैल्ट शाफ्ट टूटने का कारण बन सकती है, जिसके परिणाम गंभीर हो सकते हैं। हमेशा बैल्ट निम्नलिखित के द्वारा चेक करें कि हिचकतों को ध्यान में रखकर बैल्ट लगाएं।

सुनिश्चित कर लें कि पंखा पम्प शाफ्ट के साथ सीधा लगा हुआ है।

कुछले समय पंखा टेढ़ा-मेढ़ा नहीं घूमना चाहिए, वो शाफ्ट और बियिंग के खराब होने का कारण बन सकता है और शाफ्ट भी सकती है।

हमेशा टूटे हुए फैन को बदल दें।

मड़ी हुई पंखुड़ियों को कभी भी सीधा न करें, पुराना पंखा बदल दें अगर पंखा टूटा हुआ है या उसकी रीवर लूज है तो वह वाटर पम्प को खराब करने के साथ-साथ आपको भी जख्मी कर सकता है।

अन्य ध्यान देने योग्य बातें

- थर्मोस्टैट का उचित क्रियान्वयन निश्चित करें।
- वाटर पम्प सूखाने का ध्यान दें।
- कोलेट का उचित स्तर बनाए रखें।
- पम्प से कुछ अरमिथिक धानी की बुई सम्भावित है। यह एक सामान्य प्रक्रिया है। सील के पूर्ण रूप से क्रियान्वित होनेकी वजह से। ठीक से चलाएं।

उपरोक्त सावधानियाँ आपको वाटर पम्प के मुश्किल रूप से चलने को सुनिश्चित करती हैं।

PREVENT WATER PUMP FAILURE, WITH THESE COMMON RULES

BE SURE TO CLEAN BURRS BEFORE FIXING

Before installing the water pump on the engine surface make sure that there are no remains of the old gasket on the surface and then apply the new gasket with suitable compound.

NEVER HAMMER THE BEARING SHAFT

During the installation of the pump to the engine, many times it is necessary to tap the pump to get it aligned properly. It is important not to tap on the shaft, as this causes damage to the bearing races and balls, which can result in either a noisy pump and early failure or possibly a fracture of the shaft itself.

NEVER OVER TIGHTEN BELTS

Belts that are too tight cause overload shaft deflection and can result in serious failures. Always follow manufacturer's instructions when installing belts.

BE SURE FAN IS SEATED SQUARE WITH PUMP SHAFT

Fan wobble during rotation will cause shaft to vibrate contributing to bearing and shaft failure.

ALWAYS REPLACE DAMAGED FANS

Never straighten bent blades; replace complete fan. Stress cracks and loose rivets in blade can go undetected and cause complete failure. If fan breaks it can cause serious personal injuries and vehicle damage.

OTHER PREVENTIONS

- Ensure proper functioning of thermostat.
- Avoid dry running of water pump.
- Maintain proper level of coolant.
- Some small initial water dots from the pump seal may be experienced. This is normal and will cease after a short period of running when the seal becomes fully operational.

Above Precautions will ensure excellent performance of your water pump.

Warranty

Autofield Water Pumps Are Manufactured in compliance with all the requirements of IATE 16949:2016 and ISO 9001:2015 quality standards to achieve the supreme performance. The Company shall replace the Automotive Water Pump free of cost provided the failure is caused due to any manufacturing defect but shall not cover product failure caused by improper installation or mishandling. This warranty dose not cover any incidental or consequential damages to person or property including the cost of any related parts.

We provide a wide range of

Water Pumps to suit any

Cars, Tractors, Trucks & Earth Movers...
